SUMMARY

Data analyst with five years of experience in retail and logistics reporting. Builds SQL data sets and Power BI dashboards used by operations managers, and explains forecast gaps in plain language.

EXPERIENCE

Data Analyst, Sembawang Mart | Singapore | Mar 2023 - Present

- Built and maintain 12 Power BI dashboards on store sales, stock availability and waste, used weekly by 40 store and category managers.
- Wrote BigQuery SQL joining sales, inventory and supplier tables to create a daily stock-out report, saving about 6 hours of manual reporting a week.
- Analyse weekly sales against forecast and present the main causes of variances above 10% at the monthly supply chain review.
- Built a seasonal trend and regression model in Python to adjust promotion forecasts, lowering average forecast error for promoted items from 24% to 17%.
- Set up automated validation checks that flag duplicate and missing transaction records before dashboards refresh.

Junior Data Analyst, Straits Parcel Logistics | Singapore | Jul 2021 - Feb 2023

- Produced delivery performance reports for 5 regional hubs in Excel using pivot tables and XLOOKUP.
- Wrote PostgreSQL queries to track late deliveries by route and driver shift.
- Reconciled delivery records between the courier app and the billing system, resolving about 300 mismatches a month.
- Ran a two-week trial of a new route-planning rule and summarised the change in on-time delivery for hub managers.

EDUCATION

Bachelor of Science (Honours) in Applied Statistics, GPA 4.1 / 5.0

Singapore Institute of Technology | Sep 2017 - Jun 2021

Relevant coursework: Regression Analysis, Time Series Forecasting, Database Systems

SKILLS

Data: SQL (BigQuery, PostgreSQL), Python (pandas, statsmodels), Excel

Visualisation: Power BI, Tableau

Methods: Forecasting, Regression, Variance analysis

Certifications

- Microsoft Certified: Power BI Data Analyst Associate
